

Московский авиационный институт  
(национальный исследовательский университет)

Факультет информационных технологий и прикладной  
математики

Кафедра вычислительной математики и программирования

Лабораторная работа №1 по курсу «Операционные системы»

Приобретение практических навыков диагностики работы программного  
обеспечения.

Студент: П. А. Мохляков  
Преподаватель: Е. С. Миронов

# 1 Постановка задачи

При выполнении последующих лабораторных работ необходимо продемонстрировать ключевые системные вызовы, которые в них используются.

Используемые утилиты: strace, ltrace.

## 2 Описание утилит

Strace – утилита Linux для отслеживания системных вызовов, которые представляют собой механизм трансляции, обеспечивающий интерфейс между процессом и ядром. Работы strace возможна благодаря функции ядра ptrace. С помощью данной утилиты можно понять, что процесс пытается сделать в данное время.

Используемые ключи:

- -o file – перенаправить вывод протокола в файл
- -f – отслеживать системные вызовы у дочерних процессов
- -e trace=filters – указываются группы системных вызовов по которым будет фильтроваться вывод.

ltrace – утилита Linux, отслеживающая системные вызовы, связанные с динамическими библиотеками.

## 3 Примеры использования утилит

### Лабораторная работа 2

## 4 Вывод

Strace и ltrace – удобные инструменты для системных вызовов, они полезны при отладке и тестировании программ. Несмотря на то, что протоколы по умолчанию кажутся слишком объемными, информацию в них можно отфильтровать с помощью ключей.

Утилита strace позволяет отслеживать большинство системных вызовов, тем не менее если нужно более точно пронаблюдать за узкими аспектами существуют и другие утилиты, такие как: ltrace и ftrace. Такие утилиты пригодились мне для изучения работы программ и поиска ошибок в моих лабораторных работах.
